"[T]he dressing sheet being releasably connected to the carrier system, so that the carrier system can be separated from the dressing sheet during application thereof, wherein the carrier system comprises a supporting section and a protective sheet in coplanar alignment with the protective sheet adhered to and covering a portion of adhering surface and removable from the adhering surface separately from the supporting section, said supporting section and protective sheet adjoined along a common non-overlapping boundary wherein a first portion of the supporting section is adhered to the adhering surface of the dressing sheet to define an overlapping region and a second portion of the supporting section that is not adhered to the dressing sheet
